

# DependencyErrors

/\*\*

USAGE:

DependencyErrors(components, license, permissions)

PARAMETERS:

components : list of maps, [{}, {}, {}, ...]

Components to test. Each component defines

name => component name or capability to test for

sid => Service ID (sid) to check for in license. If present,

requires => Capability to check in the license. If present,

(optional) title => User-friendly component name

(optional) link => Link for more information in case of error

(optional) license : str (default: nil)

Site license type to check for; one of 'commercial' or nil

(optional) permission : str (default: nil)

Permissions required for current user; one of 'admin' or nil

VERSIONS:

1.0	15-Jun-10	kalida	initial version
1.1	15-Jul-10	kalida	added capability checks
1.2	03-Mar-11	kalida	updated regex for bug MT-9851
