

PageDirectory

```
/***/
```

```
PageDirectory
```

```
    creates a searchable directory of pages organized by tabs and fi
```

```
Arguments:
```

```
path : str (optional, default: current page path)
```

```
    page path the the parent page where the subpages to be organized
```

```
most_popular : map (optional, default: none)
```

```
    show section for most popular pages that have a given tag
```

```
tag : str
```

```
    tag to used for the split between left and right columns for  
    left pages have the tag, right pages do not
```

```
title : str
```

```
    title shown for left column
```

```
tabs : list (optional, default: empty list)
```

```
    list of maps describing each tab to show; map entries may contain
```

```
label : str
```

```
    label for the tab
```

```
key : str
```

```
    key used to identify the selected tab
```

```
featured_limit : num (optional, default: 15)
```

```
    number of pages to show in the "Featured" category
```

```
cache_prefix : str (optional, default: none)
```

```
    when set, caches the page directory for a given view using this
```

```
tag_constraint : str -or- list (optional, default: none)
```

```
    only list pages that have all of the specified tags
```

```
***/
```

```
// read parameters
```

```
